

CARPET HANGER

Description

A drag chain draws the bar assembly. The bars carrying carpets move along the bottom, the empty bars on top. The carpets are always hung in the same place, thus ensuring completion of the operation in a very short time.

The carpet can be fitted with 1 or 2 elevators (ascent and descent). The elevator's maximum height is 6 meters. The hanger's length can be varied from 5 to 20 meters, with capacity for hanging between 50 and 200 carpets. The entire process is performed automatically.

The hanger can be adapted to the dimensions of a drying room or could be recovered with insulating panels. The hanging bars could be made of stainless steel quality AISI 304.

Specifications
